Allowable Subject Matter

Claims 1 – 28 are allowed. The following is an examiner's statement of reasons for allowance: the closest prior art references of Hehl (U.S. 5,129,806), Wohlrab (U.S. 4,443,179) and Hehl (U.S. 4,325,287) fail to teach the combination of elements for the hydraulic closing mechanism of an injection molding apparatus, as claimed in claims 1, 12 and 28, respectively. With respect to the reference of Hehl (U.S. 5,129,806), Hehl fails to teach that the primary piston includes a piston rod, such that the piston rod is connected to a platen for a half-mold of an injection molding machine. In the apparatus of Hehl, the *primary piston is an annular piston and is not connected to the platen*. The secondary piston (25) has a piston rod, which connects it to the platen. Likewise, Wohlrab fails to teach that the piston is connected to a platen for a half-mold of an injection molding machine. In addition, Applicant argues that there is no contact between piston (23) and the flat surface of the secondary piston (7) because of the stop (20) and further argues that there is no teaching of such contact. Examiner agrees that Wohlrab does not teach such confronting surface contact between the primary and secondary pistons. With respect to the reference of Hehl (U.S. 4,325,287), Hehl teaches a mold clamping apparatus with a primary piston (92) and a secondary piston (72); however, there is no contact or confronting contact surfaces between the two pistons, since the pistons are clamped to each other via a guide sleeve (71).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
